Education

Indian Institute of Technology Kharagpur

Aug 2018 – May 2023

Bachelor's and Master's in Economics

CGPA: 8.61/10

Technical Skills

Languages: Kotlin, Java, Python, Dart, TypeScript, JavaScript, SQL, C/C++, Go

Frameworks: Microservices, REST APIs, FastAPI, Dropwizard, Spring Boot, Flutter, React.js

Infrastructure & Tools: Kubernetes, Docker, Azure, GCP, Databricks, Redis, PostgreSQL, Firebase, Git

Work Experience

Software Engineer II | Dashverse India

April 2025 – Present

Product: Dashreels 🎬 – Streaming Platform, 20M+ Installs

- Cut content production cost by **\$92K/month**, building an AI-powered video-localization engine on **Multimodal LLMs & TTS** models that processes **1.6K hours** of video per month
- Scaled an authentication service to a **96.4% success rate** across **~6M auths/month**, routing OTP/Truecaller/SSO with domestic/ILD logic and webhook-based failover
- Lifted the login funnel by **2.2%** and cut auth costs by **16%** by architecting a device-fingerprint-based automatic login for returning users (16% of new installs)
- Engineered an event-tracking pipeline processing **~40M events/day** on Azure Event Hub & **Databricks** to power downstream recommendations & analytics
- Improved **CTR** by **1.3%** with a Multi-Armed Bandit recommender serving recommendations in **under 100ms**, backed by async **FastAPI**, Postgres & Redis

Software Engineer I | Dashverse India

May 2023 – March 2025

- Launched a payments microservice processing **30K+** transactions per month, integrating in-app purchases & subscriptions across Google Play and the App Store
- Drove a **4% increase in DAU** & boosted user engagement by designing an FCM powered notification system handling over **2M** push notifications per day
- Reduced **ANR** to **under 0.5%** and **crashes** to **under 0.3%** in the **Flutter** app through profiling, UI optimization, and offloading heavy work from the main thread
- Cut app build time by **78%** (40 to 9 mins) by migrating CI/CD to self-hosted GitHub Actions runners for Android & iOS, streamlining the release cycle
- Built an **A/B Testing** framework using Flagsmith and conducted various experiments to improve key metrics like retention, conversion rates, and ARPU

Internships

ML Intern | Udaan

May 2022 – Jan 2023

- Built a full-stack observability platform for business KPIs, modeling highly seasonal data using **ARIMA & Prophet**
- Enabled anomaly detection and alerting on these KPIs by running cron jobs, reducing MTTD to under **5 minutes**
- Shipped a React/TypeScript frontend, **Kotlin** backend, and a Python ML pipeline, all deployed on **Kubernetes**

SDE Intern | Terra Economics and Analytics Lab

Apr 2021 – Jun 2021

- Built ETL pipelines to collect real estate data from various portals, expanding coverage by **8 Indian districts**
- Deployed and configured instances of OpenStreetMap, Nominatim, and Mapnik, vital for handling geospatial data at scale
- Developed an OSM API wrapper to standardize ingestion of geospatial data in different formats like WKT and GeoJSON
